Intersection Safety and Operational Assessment Process (ISOAP) *a Safe System Approach to identifying the best access Solution*

Audience: All personnel who initiate, plan, or deliver projects that add new or change existing intersections and interchanges

This webinar will provide an overview of the update to the Department's *Intersection Control Evaluation* or ICE policy directive, which has been renamed to increase emphasis on the safety performance of intersection control and configuration alternatives during the screening and analysis steps of ISOAP. The presentation will emphasize streamlining (compared to the ICE process), innovative intersection solutions, and their time and cost saving capability.

On-line (free) webinar
 Tuesday, December 17th
 1:00 pm – 3:00 pm (PST)
